

Our renewable energy sources

The use of more sustainable energy sources, combined with initiatives to lower consumption, is part of Votorantim Cimentos' strategy and helps us reduce our greenhouse gas emissions and preserve natural resources. We seek maximum efficiency in our production processes, while also relying on a renewable energy matrix.

RENEWABLE ENERGY

- We believe that cement production must use technologies that minimize the use of natural resources and enable continuous progress toward lowering emissions and energy consumption.
- Energy efficiency is part of our 2030 Sustainability Commitments and our sustainability strategy, two important drivers that are part of our journey of evolution and our history, which began more than 80 years ago.
